

GOLLU DURGAPRASAD

AI Engineer

durgaprasad7330640851@gmail.com · +91 7330640851 · Visakhapatnam, Andhra Pradesh · aiengineerportfolio.vercel.app · github.com/durgaprasad2425

PROFESSIONAL SUMMARY

AI Engineer with **3 years** of experience designing and deploying intelligent, scalable systems using Agentic AI, LLMs, and advanced prompt engineering. Proven track record across recruitment, education, and e-commerce domains. Expertise spans multi-modal AI, RAG pipelines, autonomous agents, MCP protocol integration, and cloud-native deployments — with a consistent focus on measurable real-world impact and seamless human-AI collaboration.

CORE COMPETENCIES & TECHNICAL SKILLS

Programming	Python (Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow), TypeScript
Frameworks	FastAPI, Flask, LangChain, LangGraph, LangSmith, Next.js
Databases	MongoDB, Pinecone, ChromaDB, VectorDB, Redis, PostgreSQL
AI Tools	Crew AI, FastAgents, AutoGen, LLMs, Claude, OpenAI, Gemini, Groq
Integrations	Twilio, Meta APIs, WhatsApp & SMS Automation, Google APIs, LinkedIn APIs
DevOps	Docker, Git, GitHub Actions, Postman, Swagger
Task Mgmt	Celery, APScheduler
Protocols	MCP (Model Context Protocol), RAG

PROFESSIONAL EXPERIENCE

AI Full Stack Developer

May 2026 – Present

Seekho Becho, Gurugram

Omnichannel AI Chatbot Platform

Problem: Businesses needed a unified platform to build, configure, and deploy custom AI chatbots across multiple channels with domain-specific knowledge and visual flow design.

Solution: Built end-to-end chatbot platform with **multi-format Knowledge Base ingestion** (PDFs, DOCX, images, websites), **RAG** via LangChain + MongoDB Vector Search + BM25, configurable **OpenAI/Gemini** LLMs, multi-channel deployment (WhatsApp, Slack, Telegram, Instagram, website widgets), and **drag-and-drop flow builder** using React Flow.

Impact: Enabled businesses to deploy AI assistants across 5+ channels with zero coding, powered by their own knowledge base and custom conversation flows.

WhatsApp Engine — Automation & Campaign Platform

Problem: Businesses needed a unified WhatsApp platform supporting unofficial and official API connections, bulk campaigns, and intelligent automated responses at scale.

Solution: Built with **Node.js**, **Baileys** for QR-based connections and **Meta WhatsApp Business API** for official messaging. Implemented multi-session management, **bulk campaign engine** with dynamic variables and scheduling, real-time inbox with Sent/Delivered/Read tracking, AI Agent routing, and keyword auto-replies.

Impact: Delivered full-featured WhatsApp automation handling multi-account management, campaign execution, and intelligent auto-responses at scale.

SeekhoAI — AI-Powered Marketing Automation Platform

Problem: Businesses struggled to consistently produce marketing content and ad campaigns across platforms, requiring significant manual effort per product launch.

Solution: Built AI platform transforming product images and websites into ready-to-publish campaigns. Implemented **AI image analysis** (captions, hashtags, SEO, ad copy), **Playwright-based website analysis** pipeline, **multi-platform publishing** (Instagram, Facebook, LinkedIn, YouTube) via Celery/Redis, and **Meta + Google Ads API** integration for AI-assisted campaign creation.

Impact: Enabled businesses to launch AI-generated, multi-platform campaigns from a single product image or URL with minimal human effort.

Tech Stack: Python, FastAPI, Next.js, React, TypeScript, LangChain, OpenAI, Groq, MongoDB, PostgreSQL, SQLAlchemy, React Flow, Tailwind CSS, Celery, Redis, Baileys, Meta APIs, Google Ads API, Docker

AI Engineer

Nov 2025 – Apr 2026

Eminence Technology, Punjab

Shopify MCP Agent

Problem: Merchants lacked conversational access to live Shopify store data, requiring manual dashboard navigation and causing delays in business decisions.

Solution: Built an intelligent agent using **MCP (Model Context Protocol)** to fetch and summarize real-time Shopify data via natural language. Integrated LLMs for semantic understanding and **FastAPI** for real-time responses.

Impact: Reduced data-retrieval time by **70%+**; enabled non-technical users to self-serve store insights conversationally, eliminating manual reporting.

NEET Physics AI — Multi-Modal Education Engine

Problem: Coaching institutes could not efficiently digitize NEET/JEE content from textbooks and handwritten PDFs for scalable personalized learning.

Solution: Developed **multi-modal AI pipeline** using **Chandra OCR** for structured extraction from printed and handwritten content. Stored embeddings in **Pinecone** and used **Claude** to auto-generate lecture plans, quizzes, and conceptual summaries.

Impact: Reduced instructor prep time by **80%**; delivered AI-personalized study materials for thousands of NEET/JEE aspirants.

Tech Stack: Python, FastAPI, LangChain, Anthropic Claude, Chandra OCR, Pinecone, MongoDB, MCP Protocol, Docker

AI Engineer

Hallmark Global Technologies Ltd

Sep 2023 – Oct 2025

AI-Led Interview Bot

Problem: Enterprise clients faced inconsistent, time-intensive manual interview processes unable to scale to high-volume hiring demands.

Solution: Designed **multi-stage adaptive interview chatbot** using **OpenAI GPT-4** and **Anthropic Claude** with dynamic question generation, contextual follow-up logic, and structured scoring rubrics.

Impact: Reduced recruiter workload by **60%+**; delivered consistent, bias-reduced assessments at scale, cutting time-to-shortlist by several days per cycle.

AI Matcher — Intelligent Scoring Engine

Problem: Manual resume-to-job matching was slow, subjective, and error-prone across recruitment, matrimonial, and sales verticals.

Solution: Built **domain-agnostic scoring and ranking engine** using NLP embeddings to semantically match candidates to opportunities, with modular architecture for fast adaptation across verticals.

Impact: Reduced time-to-hire and improved placement quality; engine reused successfully across 3 distinct business domains.

Multi-Modal RAG Chatbot

Problem: Enterprise teams lacked a unified tool to extract insights from PDFs, Word files, images, and web content, forcing manual review and siloed workflows.

Solution: Built **RAG-based multi-modal chatbot** using **LangChain** and **Pinecone** vector retrieval capable of ingesting and reasoning across PDFs, Word docs, images, and live web content simultaneously.

Impact: Reduced manual review time by **65%**; enabled teams to surface answers from complex mixed-format knowledge bases in seconds.

Tech Stack: LangChain, OpenAI GPT-4, Pinecone, MongoDB, FastAPI, Celery, Twilio, Meta APIs, Docker

ADDITIONAL PROJECT HIGHLIGHTS

AI-Powered Email Template Generator

Problem: CRM teams wasted hours manually drafting personalized email campaigns, slowing outreach and reducing campaign effectiveness.

Solution: Built **dynamic LLM-powered email generator** adapting tone, structure, and content to user inputs and CRM context, integrated into CRM pipelines for automated triggering.

Impact: Accelerated campaign creation by **75%**; improved personalization at scale and reduced manual drafting across sales and marketing teams.

Auto Email Reply System

Problem: High volumes of inbound support emails overwhelmed agents, causing delayed and inconsistent responses impacting customer satisfaction.

Solution: Automated **context-aware email reply generation** by semantically analyzing email subjects and body content to produce smart, professional replies without human intervention.

Impact: Cut average response time by **80%**; improved satisfaction scores and freed agents to focus on high-value escalations.

Image Generation & Visual Intelligence Pipeline

Problem: Marketing teams lacked automated tools for generating branded visual assets and extracting semantic insights from images at production scale.

Solution: Built **Vision + NLP pipeline** integrating image generation, summarization, sentiment analysis, keyword extraction, and captioning from text prompts and uploaded images.

Impact: Reduced visual content production time by **70%**; empowered teams to generate brand-ready assets and make data-driven content decisions on demand.

EDUCATION

Bachelor of Technology — Computer Science Engineering	2020 – 2024
Rajiv Gandhi University of Knowledge Technologies, Nuzvid	CGPA: 8.4 / 10.0
Pre-University Course — Science Stream (Class XI – XII)	2018 – 2020
Rajiv Gandhi University of Knowledge Technologies, Nuzvid	CGPA: 8.45 / 10.0

CERTIFICATIONS & ACHIEVEMENTS

- Microsoft Certified: Azure AI Fundamentals (AI-900)** — Score **731/1000** — Validates expertise in machine learning, cognitive services, and AI workloads on Azure.
- GATE 2023 Qualified** — Graduate Aptitude Test in Engineering (CS & IT) — Nationally competitive examination conducted by IITs; demonstrates strong CS fundamentals.
- Global Hackathon Challenge Participant** — Designed and prototyped an intelligent AI solution under competitive conditions in an international hackathon event.
